

the Trebuchet

a working model

These sheets were drawn to accompany a Trebuchet 'kit' we designed a few years ago. It should give enough information for prospective builders to get started.

The wooden components were cut from 10mm square section softwood, 10mm wide lolly (popsicle) sticks and matchsticks.

WARNING: Splinters may be present at the ends of some of the pieces of wood. Also the cut ends of the wire for the trigger may be sharp - TAKE CARE!

This kit is not recommended for children under the age of 12 years, except when supervised by a responsible person.

NB - Not suitable for children under 36 months - kit contains small parts
